Si18RPMsens, Optical Interrupter Assembly

with 12" Leads and with 3-Pin Molex 22-01-3037 Polarized Connector

- The **Si18RPMsens** is an optical RPM sensor used as an accessory with **all Signal Consulting, LLC Motor Controller Boards** when **digital closed-loop speed control is required**. This sensor must be used with the **Si18RPMwheel** accessory. These two accessories measure the speed (RMP) of a rotating shaft and provide the feed-back required to keep the shaft-speed at a constant RPM. These accessories are **not** needed in **open-loop**, speed control applications. This sensor comes with **12" Leads** and includes a **3-Pin Molex 22-01-3037 Polarized Connector**.
